(54) Graphical data base query system.

(57) According to the invention apparatus for directing queries to a database containing information in order to access selected information comprises display means for displaying in graphical form a plurality of parameters relating to queries (51 to 57), selection means for selecting a set of the displayed parameters in order to define a required query, operating means responsive to the selection of the parameters for performing the required query, and display means for displaying the results of the required query.

According to another aspect of the invention a method of directing queries to a database containing information in order to access selected information comprises displaying in graphical form a plurality of parameters relating to queries, selecting a set of the displayed parameters in order to define a required query, performing the required query in response to the selection of the parameters, and displaying the results of the required query.
